Follow these instructions and complete the activity
1. Use your notes from the presentation to answer these questions
2. Use your understanding of Linux commands and execute the ones you have just learned to complete the questions
3. Answer them by creating a copy of this google doc

What files are in your home directory?

What users are on your computer?

What user are you?

What groups are you in?

What are the hidden files in your home directory?

Create a directory ilovelinux in your home directory, and take a screenshot of your terminal

Create a blank, empty, file on your desktop and take a screenshot of your terminal

List the contents of the passwd file on your computer, and take a screenshot of your terminal

Install the package libpam-cracklib

What are the first 5 packages installed on your computer?

Delete the package libpam-cracklib on your computer

Create a user linux101 on your computer, and take a screenshot of your terminal

Set the password for user linux101

Try this on your own for fun :)

1. Install and try using the lolcat command
2. Install and try executing cmatrix
3. Install and try executing oneko
